GENERAL INFORMATION

DIOKI d.d. was founded on 17 July 1995 as a merger of INA-OKI d.d. of Zagreb, DINA d.d. of Omišalj and INA-Naftaplin's Ethylene Production Unit of Zagreb. OKI - Organic Petrochemical Company was founded in 1959, and it was the first producer of petrochemicals and plastics in the country. DINA was established as a joint-venture of INA and the Dow Chemical Company to be acquired by INA in the 1980s. INA-Naftaplin's Ethylene Production Unit was founded in 1982. Until the end of 1996 the Company had been a member of the INA-Group; then INA transferred it to the State Agency for Deposit Insurance and Bank Rehabilitation (DAB). In the process of voucher privatization in 1998, a 51% stake in the company was transferred to privatization and investment funds (PIFs). Since 29 November 1999, the company has been operating under the name DIOKI d.d. On 1 February 2003, the company separated its operations on Krk Island to establish two companies, i.e. Adria procesna industrija dioničko društvo (API) and Kijac nekretnine d.d. (Kijac).

In October 2004 the company was fully privatized, and DIOKI Holding AG, headquartered in Switzerland, became the majority owner. In the privatization process DIOKI acquired Kemikalije d.o.o. and thus the Zagreb site was fully integrated - from tank farm areas to final products. In March 2005 API d.d. took the old name DINA d.d.

THE COMPANY'S BASIC ACTIVITY IS THE PRODUCTION OF POLYMERS AND PETROCHEMICALS

- Low density polyethylene (LDPE OKITEN® and LDPE DINALEN®)
- General purpose polystyrene (GPPS DOKI® POLISTIREN)
- High impact polystyrene (HIPS DOKI® POLISTIREN)
- Expandable polystyrene – to be started up at the beginning of 2006 (EPS OKIROL®-E)
- Ethylene

DIOKI's annual production capacities are 260 000 tonnes (to be increased by 15 000 tonnes of expandable polystyrene at the beginning of 2006).

Capacities by products:

• LDPE OKITEN:	50 000 tonnes
• LDPE DINALEN:	70 000 tonnes
• GPPS DOKI® POLISTIREN & HIPS DOKI®POLISTIREN :	50 000 tonnes
• PS colour concentrates:	3 300 tonnes
• EPS OKIROL® -E (production to be started up at the beginning of 2006):	15 000 tonnes
• Ethylene:	90 000 tonnes

DIOKI d.d. is one of the biggest exporters in Croatia; at present, the company exports 80% of its production volume. A long export tradition and the fact that DIOKI's products are readily marketable on the European markets prove their quality and competitiveness.

Technical Support to DIOKI's customers is offered by Application Department set up in Commercial Sector, and Product Development and Application Department in Research, Development and Purchase Sector.

The accredited physical and chemical laboratory set up in Product Development and Application Department tests products for mechanical, thermal and rheological properties and flammability.

Application Department provides customers with technical data on DIOKI's products, technical specifications, safety data sheets, declarations of conformity, and information about technical literature.
